

CHOOSING ASSISTIVE TECHNOLOGY FOR STUDENTS WITH DISABILITIES

There is no doubt that technology is a great equalizer for students with disabilities. But what goes into selecting the right technology? What tools and strategies can improve student performance? Join us as Dr. Donna Hopstetter discusses the importance of using the **SETT Framework** to make good decisions. By focusing on the STUDENT, the ENVIRONMENT, the TASKS, and the TOOLS, completion of the comprehensive SETT form helps ensure the selection of appropriate, effective technology.

NOVEMBER 13, 2019 | 6:00 – 8:00PM

Are you interested in assistive technology for your school-aged child? If so, have you ever wondered what goes into the decision-making process & who participates in it? There's a lot to consider! What kind of technology is needed depends on many factors, such as:

- The student's special needs & current abilities
- The physical environment
- The supports & resources available
- The tasks & activities to be accomplished
- The technological options (no tech, low tech, or high tech) under consideration

Join us for an enlightening evening with Dr. Donna Hopstetter, Supervisor of Special Education for Colonial Intermediate Unit 20. The SETT Framework involves teamwork. Input is needed & valued from everyone who supports the student. This collaboration results in sound technological decisions.

If you are a family member or a professional interested in fostering the success of students with disabilities, we welcome you!
